OSA-1820-66
19 April 66

MEMORANDUM FOR THE RECORD

SUBJECT : CHIGOE

(b)(3)

1. [redacted] of ORD discussed camera requirements on April 18th for CHIGOE with the writer.

2. A K A-53 A with a 12"-lens and a stable mount was recommended for vertical large-scale photography. Confirmed with Chicago Aerial Industries that this camera would be suitable at 500' to 5000' and 220 knots if the lens were refocussed to 2000' instead of infinity. An ART-63 or ART-21 stable mount produced by Aeroflex and standard Navy stock will accommodate the camera. It was agreed that [redacted] would go to his normal Navy support contact for these items. (b)(3)

3. I agreed to supply a 70 mm tracker camera complete with IMC, automatic exposure control, plastic bubble, and mount ring. IMC is to be modified for low altitude. Two 70 mm trackers are now at Perkin Elmer from FOG assets awaiting Iran. One of these may be released for this purpose. These cameras have exposure control and IMC capabilities whereas Agency trackers do not. [redacted] has been queried about release of camera. (b)(3)
